*Heaven+Earth* investigates the mystical territory between the tangible and the unseen, the material and the transcendent.

Our work begins with the acknowledgment that human life is not linear, but cyclical: we fold into ourselves, break, dissolve, and re-emerge as new forms.

Our mortal parade endures as transformation fights entropy. Our humanity is challenged, but emerges into light, dusted with joy, and stronger for our failings and faults.

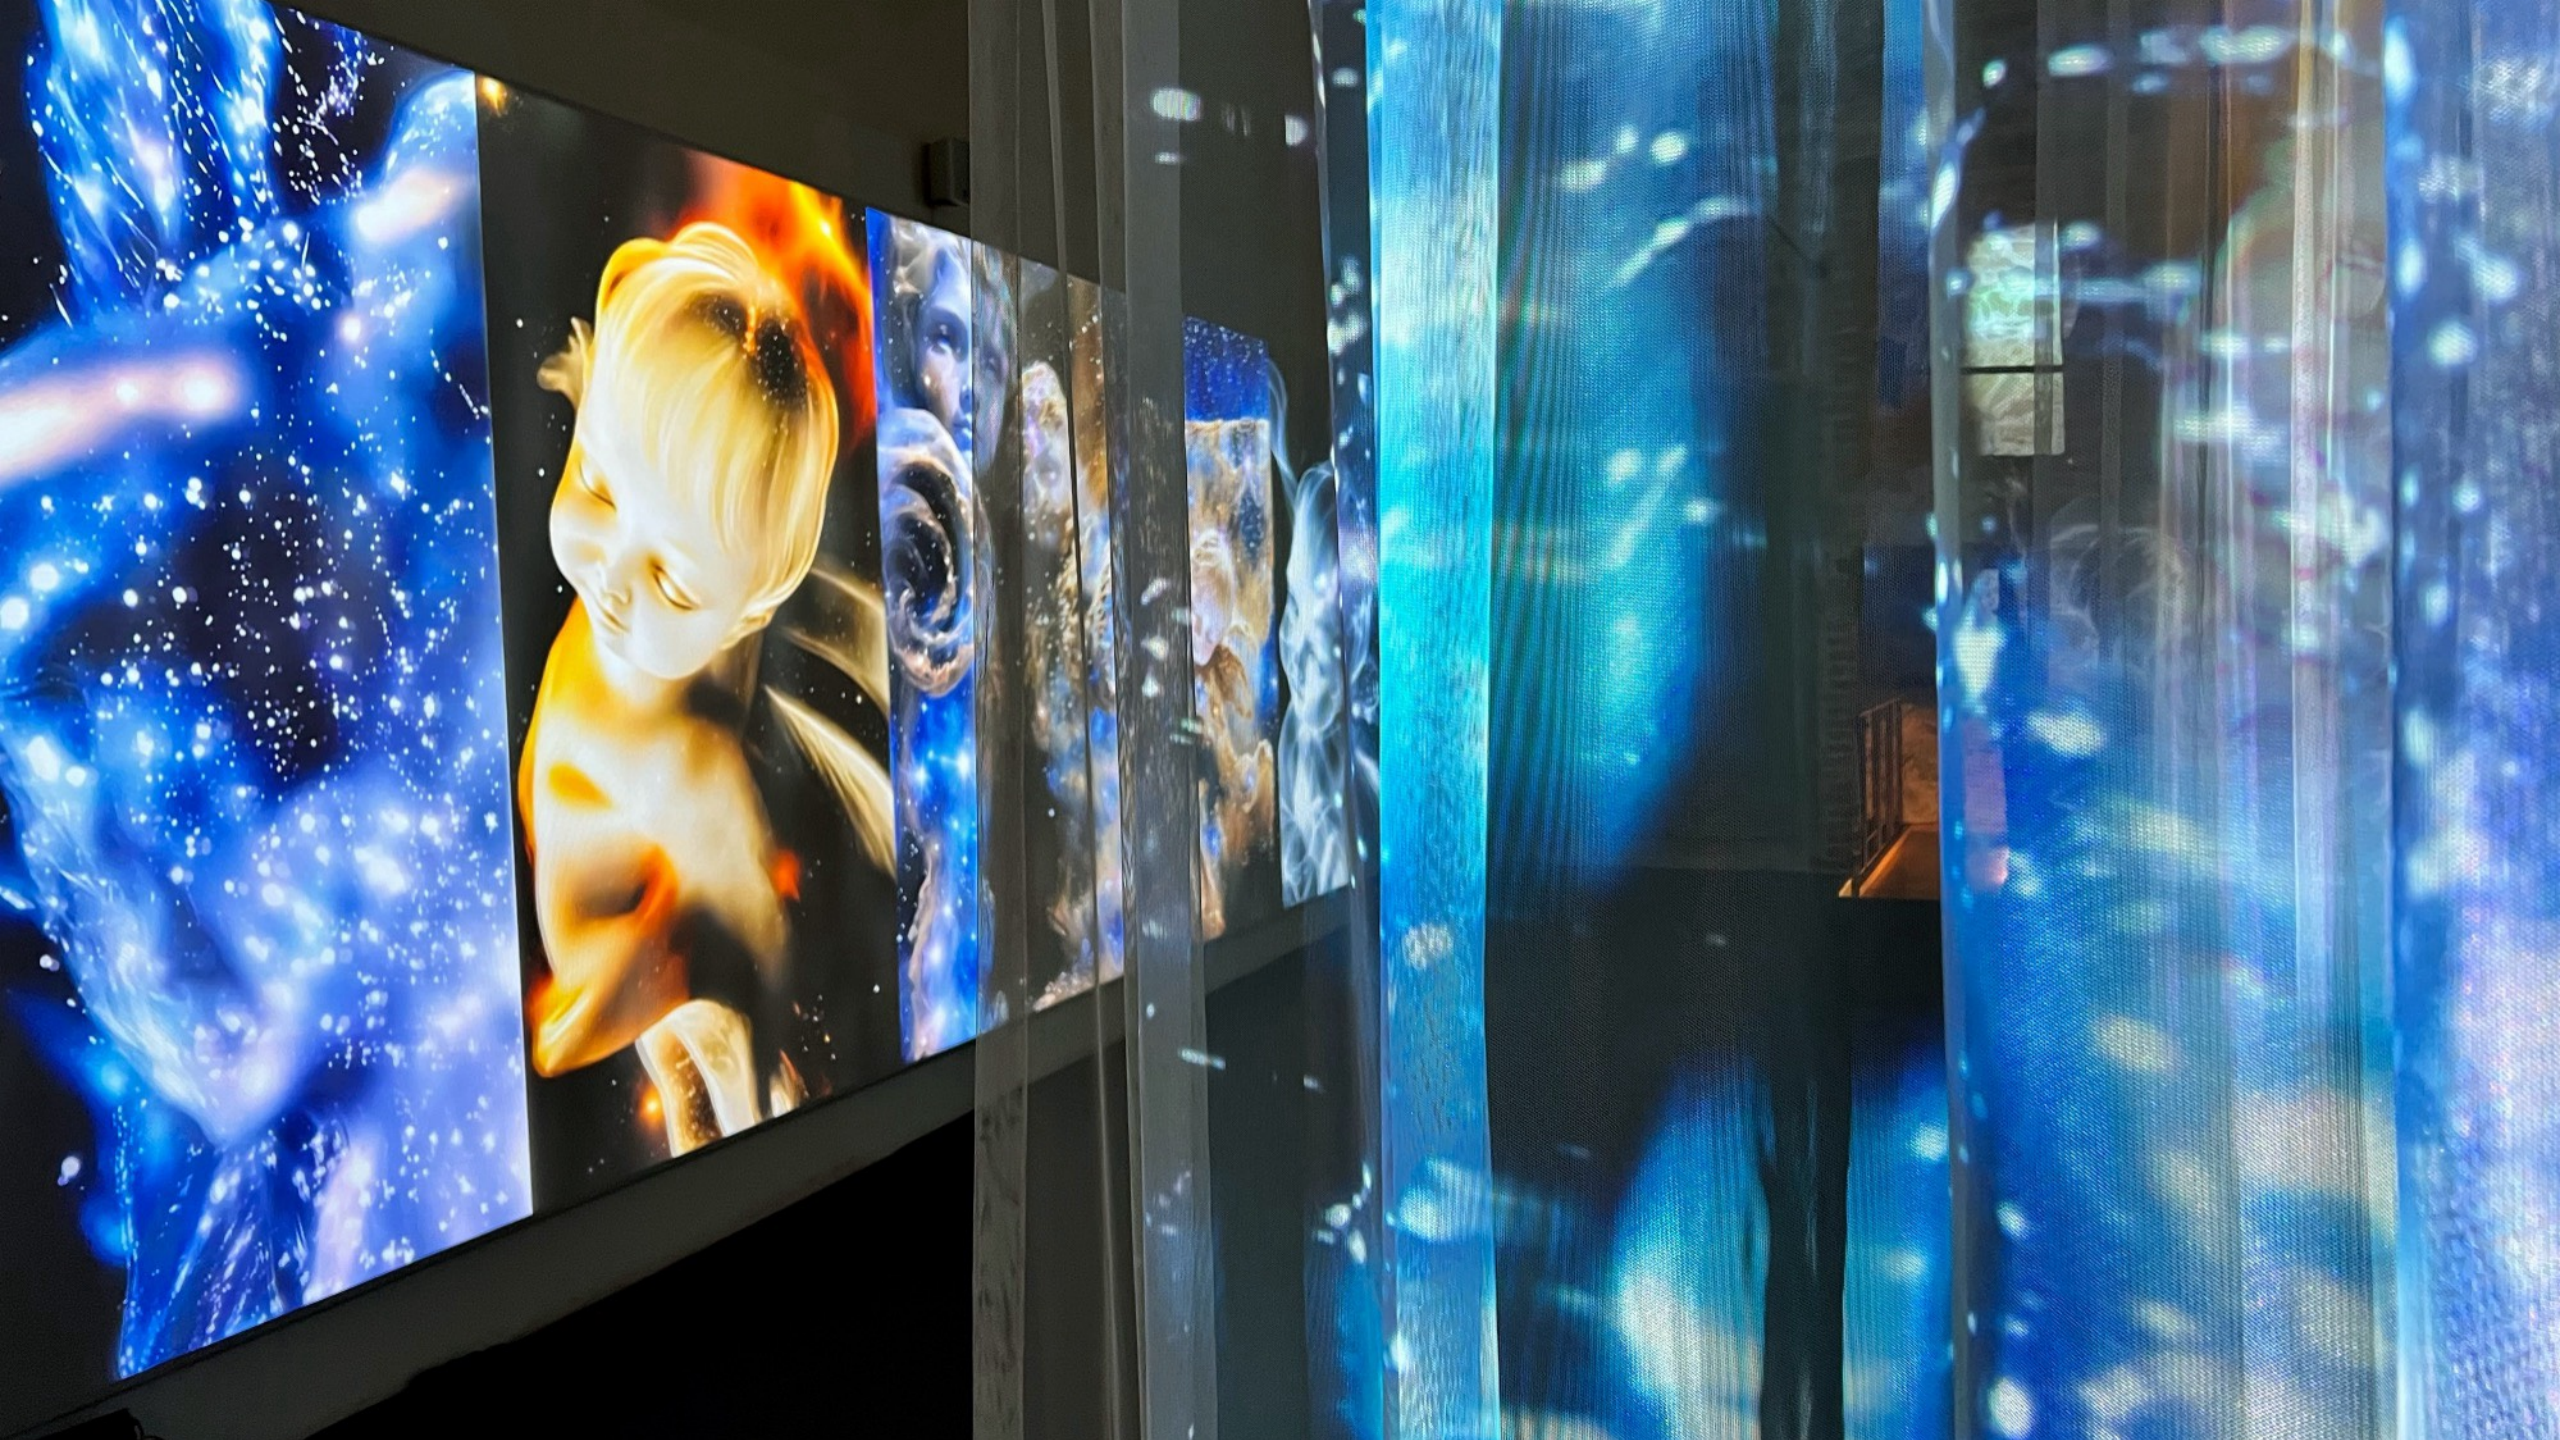

We embrace the “glitch” as proof of life, the catalyst of awareness expressed in the 1600s and today— an unbroken line of evolutionary struggles.

All while we search for solutions to *unanswerable* questions.
